

**Travis Perkins plc Annual General Meeting held on Monday 22 April 2024 at
Linklaters, One Silk Street, London, EC2Y 8HQ**

Composite set of questions and answers discussed

Q. How is the Group addressing decarbonisation of its vehicles?

A. The Group remains committed to its decarbonisation goals and the fleet roadmap is published on the Group's website. Accordingly, the Group has successfully trialled the use of hydrotreated vegetable oil. The Group also continues to monitor advances beyond the Group in the use of hydrogen as a low-carbon alternative to diesel. The Group also uses an electric vehicle in its CCF business for customer deliveries. We perceive there to be a challenge in adopting electric vehicles more widely in our business because of the current limitations on the lift capability of electric vehicles.

Q. How does the Group ensure availability of stock to meet customer demand?

A. In our Toolstation business we look at our metrics which measure availability to meet the customer's desire to get what they want. In our merchanting businesses, where requirements vary more widely from customer to customer and for each customer may change depending on the bespoke nature of their project, talking to our customers to understand how we can continue to best serve their needs is also very important alongside our metrics. By doing this we are able to assess and identify customer demands in advance and plan our stock accordingly.

Q. The Group has made good progress in making use of recycled materials in the printing of its Annual Report and Accounts; in future will the Group consider printing entirely on paper recycled from its own operations?

A. Thank you for your encouragement. We will continue our efforts to reduce waste in this and our other activities.
